

{EPITECH}

EPITECH DUMP

< RIGID LIKE THE STONE />

EPITECH DUMP

You are going to delete everything on your computer. If you forgot to backup some data please ask an APE. Once started, it will be too late

Don't forget, keep the stone in your pocket

0. Disable Secure Boot

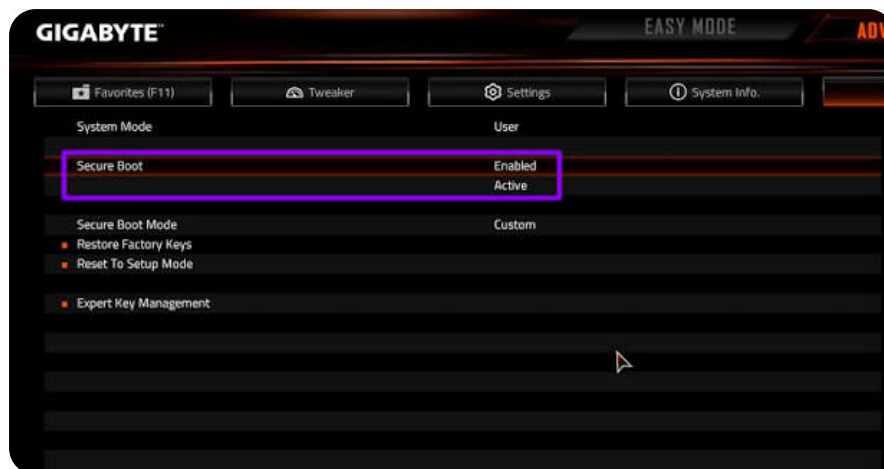

You have to disable secure boot. First you need to go in your BIOS settings. When you power on your computer, press a specific key to enter the bios menu. Depending on your computer's brand, this key may varies.

You have to spam the key while the computer is powering up until the boot menu shows up

Brand	BIOS/UEFI Setup Key
Framework	F2
Acer	Del or F2
ASUS	Del or F2
Dell	F2
HP	Esc → F10
Lenovo	F1 or F2
MSI	Del
Samsung	F2
Gigabyte	Del

Secure boot is often in security or boot section, search for it and click to **disable it**

If you have any question, ask an **APE**

1. Boot on USB stick

To install an operating system on your computer from a USB stick, you first need to select the usb stick as a boot device. When powering your computer, you need to press a specific key to enter the boot menu. Depending on your computer's brand, this key may change.

You have to spam the key while the computer is powering up until the boot menu shows up

Brand	Boot Menu Key
Framework	F12
Acer	F12 (enable in BIOS)
ASUS	Esc or F8
Dell	F12
HP	Esc → F9
Lenovo	F12 or Fn + F12
MSI	F11
Samsung	Esc or F12
Gigabyte	F12

In the boot menu search the USB stick and press enter.

You can now choose Windows or Ubuntu depending on which operating system you want to install

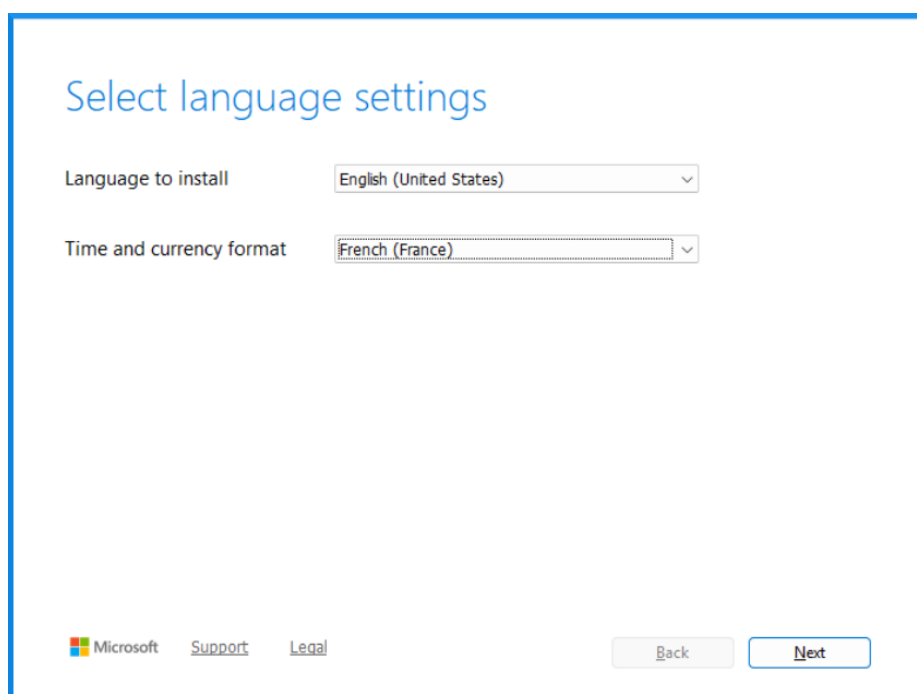

2. Windows

Choose **Winboot mode** and press Enter

Choose language and timezone

Choose the correct **keyboard layout** for you (Azerty or Qwerty in most case)

Select keyboard settings

Keyboard or input method French (Legacy, AZERTY) ▾

 Microsoft [Support](#) [Legal](#)

Choose your name

Who's going to use this device?

You'll use this name to sign in to your device.

Enter your name

Is this account for a child or teenager?
If so, consider signing in with a Microsoft account. When younger family members log in with a Microsoft account, they'll have privacy protections focused on their age. Parents and guardians can also set up a family group with Microsoft Family Safety.

For more information, use another device and visit aka.ms/accounttype.

Next

Choose your password

Create a super memorable password

Make sure to pick something you'll absolutely remember.

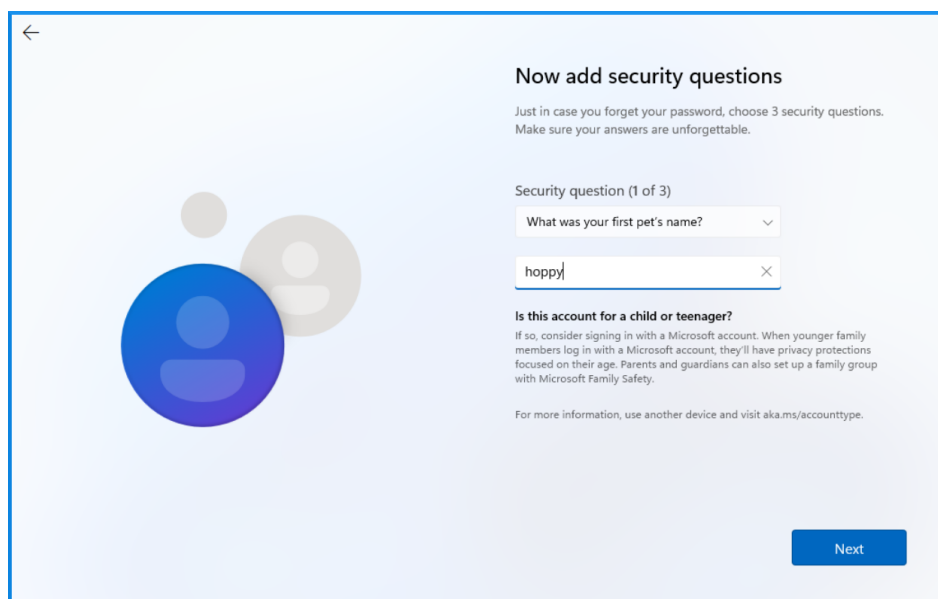

Enter a password

Is this account for a child or teenager?
If so, consider signing in with a Microsoft account. When younger family members log in with a Microsoft account, they'll have privacy protections focused on their age. Parents and guardians can also set up a family group with Microsoft Family Safety.

For more information, use another device and visit aka.ms/accounttype.

Next

Choose 3 security questions

The screenshot shows the 'Now add security questions' step in a Windows account setup window. On the left is a large blue circular profile picture placeholder. The main text area on the right has a title 'Now add security questions', a subtext 'Just in case you forget your password, choose 3 security questions. Make sure your answers are unforgettable.', and a label 'Security question (1 of 3)'. Below this is a dropdown menu showing 'What was your first pet's name?' and a text input field containing 'hoppy'. Further down is a section titled 'Is this account for a child or teenager?' with explanatory text and a link to 'aka.ms/accounttype'. At the bottom right is a blue 'Next' button.

Post installation

Once logged into Windows, connect to the **IONIS Wifi**

Username : *Epitech email*

Password : *Epitech password*

If you can't connect to the wifi, ask an **APE**

Once everything is finished and working, you can go the Ubuntu installation page

3. Ubuntu

If you forgot how to **enter** the **boot menu**, go back to the **Task 1 (boot on USB stick)**

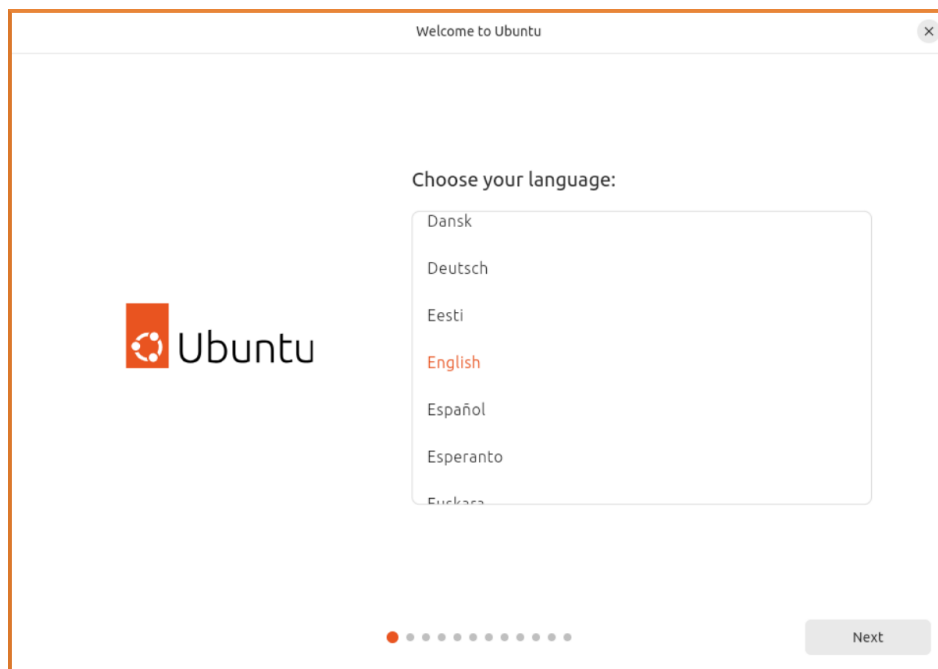

Choose **Boot in normal mode** and press Enter

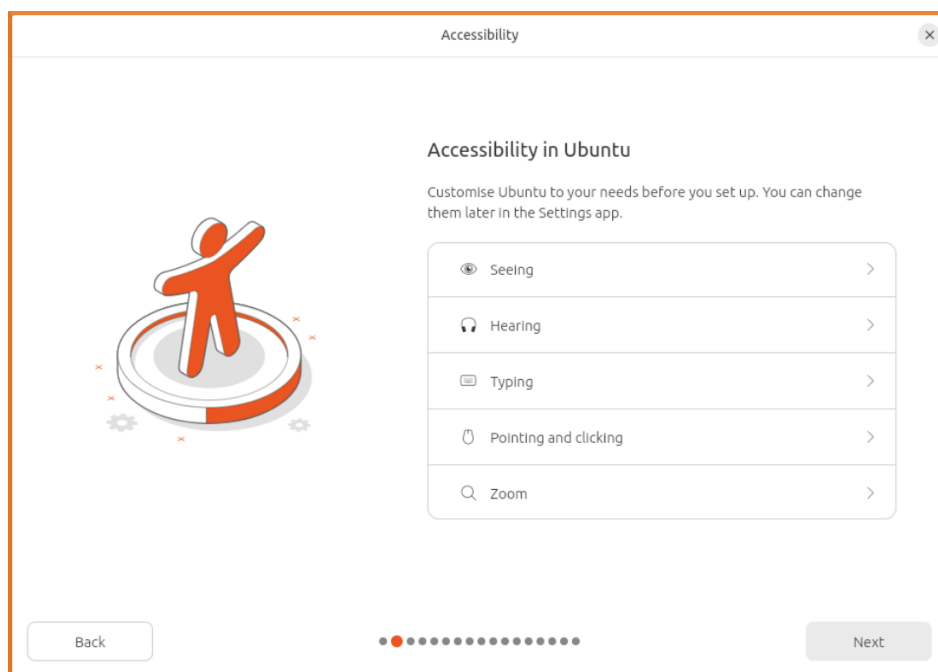

Select **Try or Install Ubuntu**

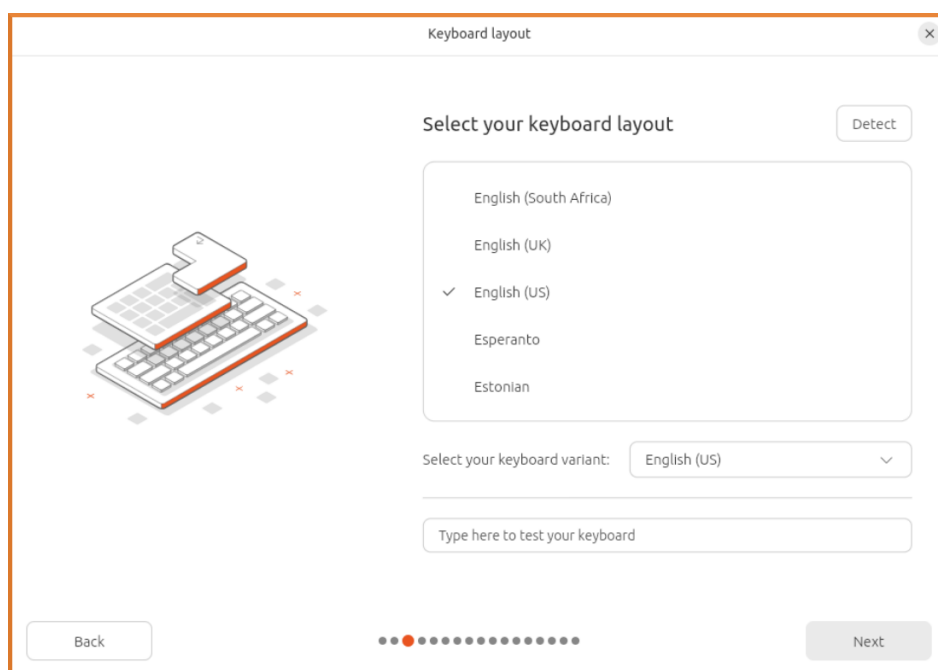

In language selection, select **English** then click next

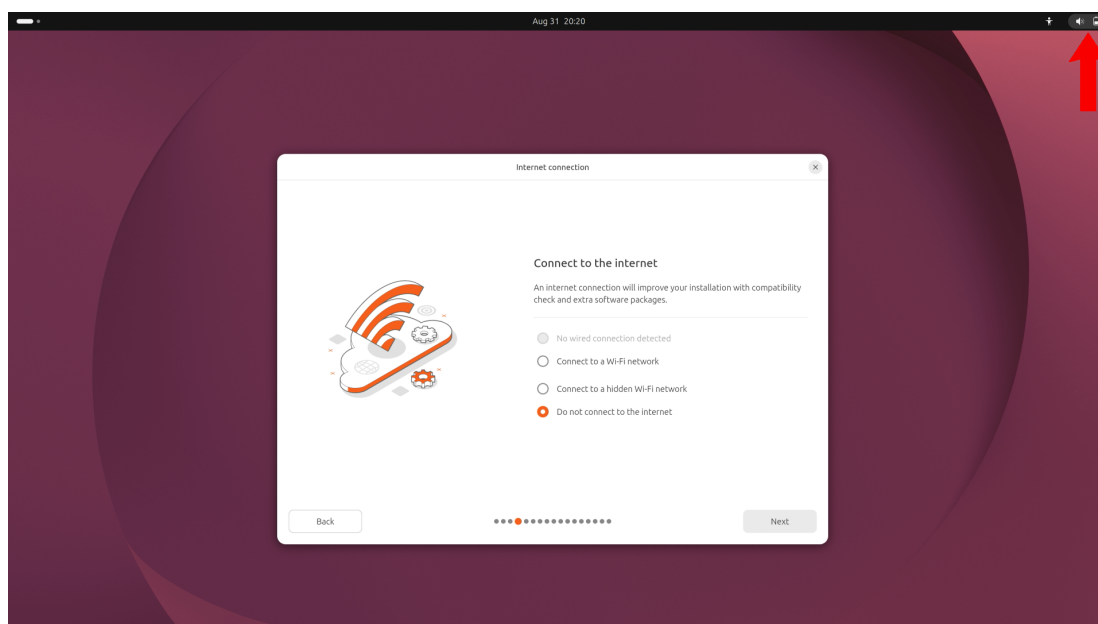

If you need accessibility, you can setup it here

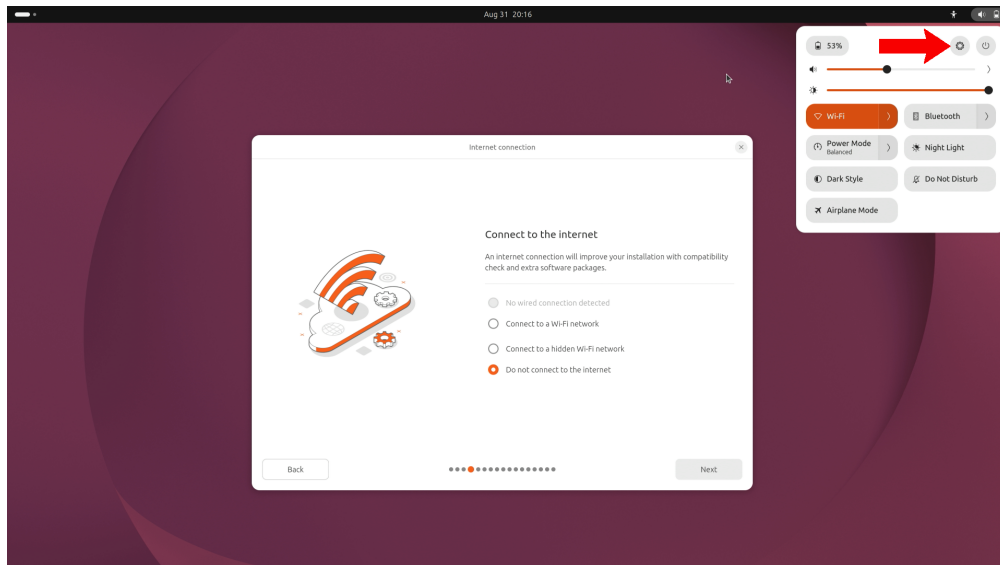

Choose your keyboard layout. In most case it will be French, if you have a qwerty keyboard select English

When you reach the internet page, click on the right top corner of the screen

It opens a box where you can find a gear (⚙️), click it to open the settings menu

Now you are in the wifi settings, select **IONIS** wifi and fill out the form:

Wifi name : IONIS

Wi-Fi Security : WPA & WPA2 Enterprise

Authentication : Protected EAP (PEAP)

No CA certificate is required : Check

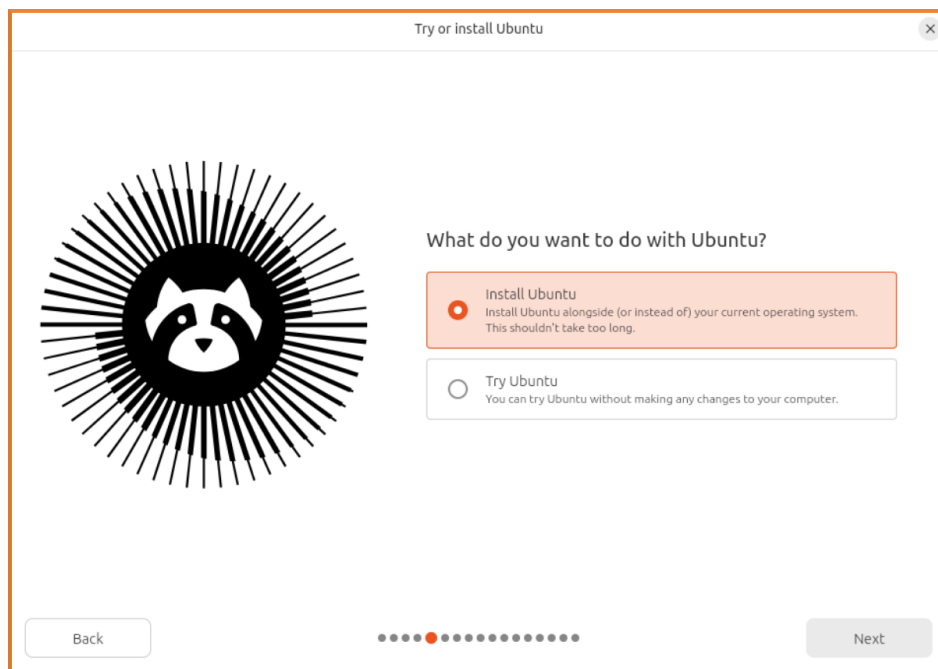

PEAP Version : Automatic

Inner authentication : MSCHAPv2

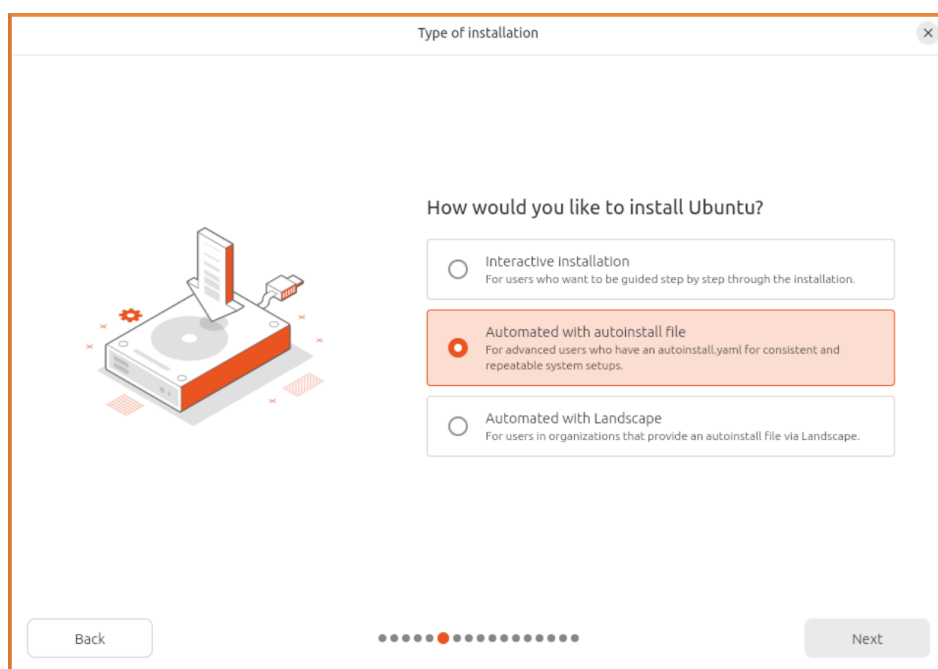

Username : Epitech email

Password : Epitech password

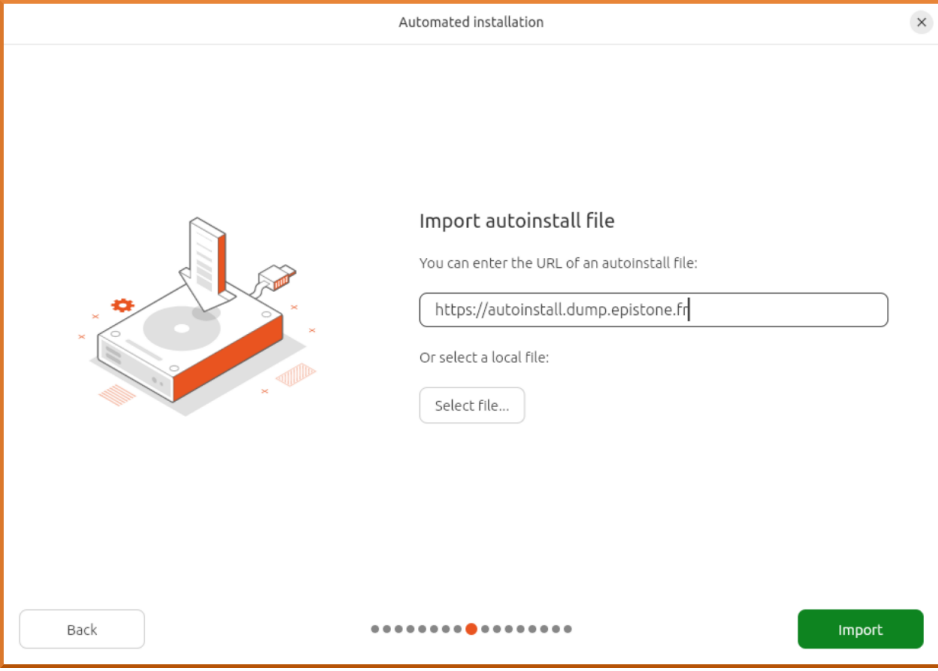

Choose **Install Ubuntu**

Choose **Automated with autoinstall file**

Enter the following url: <https://autoinstall.dump.epistone.fr>

The screenshot shows a window titled "Automated installation" with a close button in the top right corner. On the left is an illustration of a server with a document and a USB drive. The main text reads "Import autoinstall file" followed by "You can enter the URL of an autoinstall file:". Below this is a text input field containing the URL "https://autoinstall.dump.epistone.fr". Underneath is the text "Or select a local file:" followed by a "Select file..." button. At the bottom left is a "Back" button, in the center is a progress bar with 11 dots (the 5th dot is red), and at the bottom right is a green "Import" button.

Automated installation

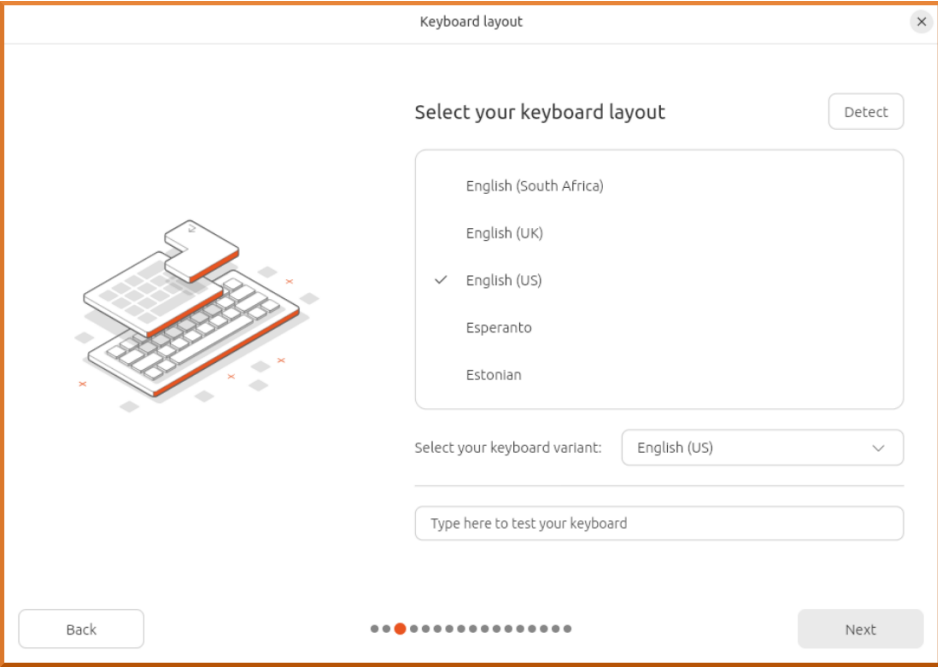

Import autoinstall file

You can enter the URL of an autoinstall file:

Or select a local file:

●●●●●●●●●●●

Choose your keyboard layout, in most case it will be French. If you have a qwerty keyboard select English

The screenshot shows a window titled "Keyboard layout" with a close button in the top right corner. On the left is an illustration of two keyboards. The main text reads "Select your keyboard layout" followed by a "Detect" button. Below this is a list of keyboard layouts: "English (South Africa)", "English (UK)", "English (US)" (which has a checkmark), "Esperanto", and "Estonian". Below the list is a "Select your keyboard variant:" label followed by a dropdown menu showing "English (US)". At the bottom is a text input field with the placeholder "Type here to test your keyboard". At the bottom left is a "Back" button, in the center is a progress bar with 11 dots (the 2nd dot is red), and at the bottom right is a "Next" button.

Keyboard layout

Select your keyboard layout

English (South Africa)

English (UK)

✓ English (US)

Estonian

Select your keyboard variant:

●●●●●●●●●●●

Disk setup

How do you want to install Ubuntu?

☐ Install Ubuntu alongside Ubuntu 26.04 LTS
Select a partition to resize and create space for Ubuntu. You can choose your operating system during boot.

☐ Erase Ubuntu 26.04 LTS and install Ubuntu
Warning: All files and data from the existing Ubuntu 26.04 LTS installation will be permanently deleted.

☐ Erase disk and install Ubuntu
Warning: All data and partitions on the disk will be erased, including operating systems.

☒ Manual installation
For advanced users seeking customized disk setups.

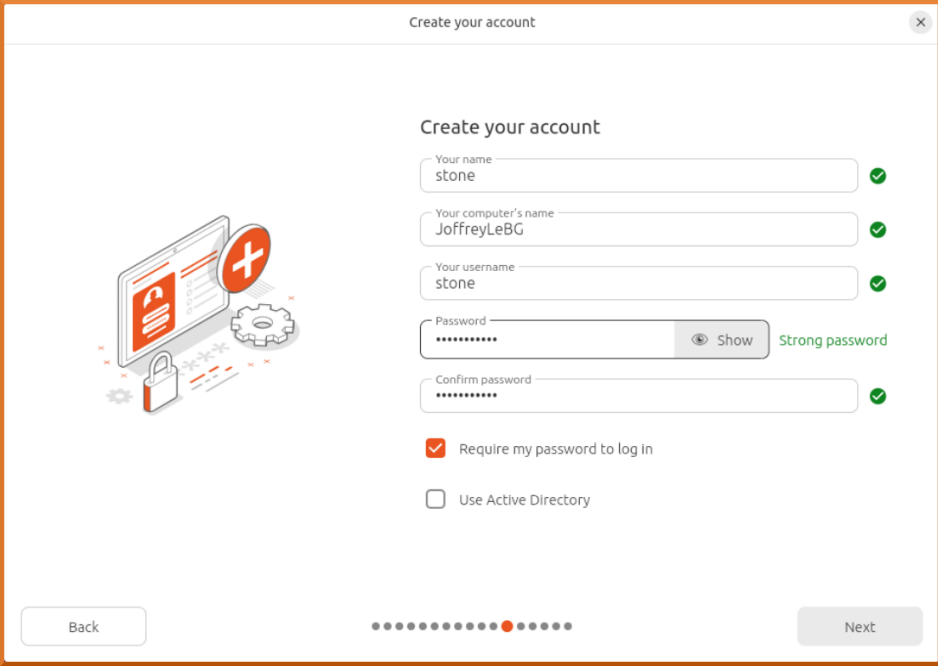

Back

Next

Choose **no encryption**

[illegible]

Create your local account for Ubuntu

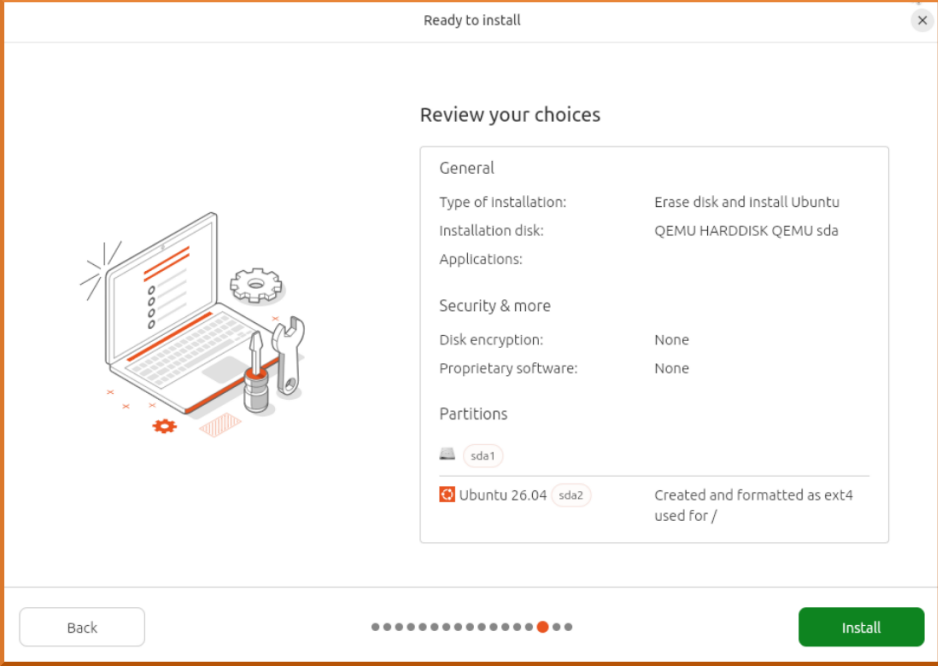

The 'Create your account' window is titled 'Create your account' and features a close button (X) in the top right corner. On the left, there is an illustration of a laptop with a red plus sign, a gear, and a padlock. The main area contains several input fields and checkboxes:

- Your name:** 'stone' (with a green checkmark)
- Your computer's name:** 'JoffreyLeBG' (with a green checkmark)
- Your username:** 'stone' (with a green checkmark)
- Password:** A masked field with a 'Show' button and the text 'Strong password' (with a green checkmark)
- Confirm password:** A masked field (with a green checkmark)
- ☒ **Require my password to log in**
- ☐ **Use Active Directory**

At the bottom, there is a 'Back' button, a progress indicator with 10 dots (the 5th dot is red), and a 'Next' button.

Everything is set up, you can click install and wait until installation is complete 🕒

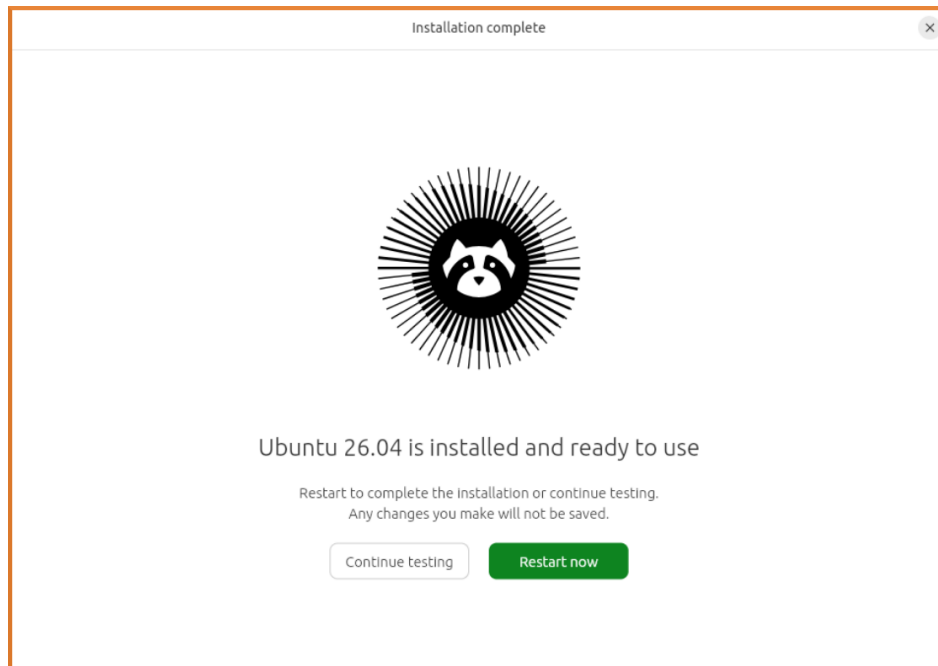

The 'Ready to install' window is titled 'Ready to install' and features a close button (X) in the top right corner. On the left, there is an illustration of a laptop with a gear, a wrench, and a screwdriver. The main area is titled 'Review your choices' and contains a summary of the installation options:

General	
Type of installation:	Erase disk and install Ubuntu
Installation disk:	QEMU HARDDISK QEMU sda
Applications:	
Security & more	
Disk encryption:	None
Proprietary software:	None
Partitions	
sda1	
Ubuntu 26.04	sda2 Created and formatted as ext4 used for /

At the bottom, there is a 'Back' button, a progress indicator with 10 dots (the 5th dot is red), and a green 'Install' button.

Installation is finished, you can now reboot and remove the USB key

If you forgot how to **boot** on the **usb key**, go back to the **Task 1 (boot on USB stick)**

Choose **Alpine** and press *Enter*, then choose **Boot in normal mode** and press *Enter*

When you arrive on Alpine iso image, you can type **root** and press *Enter* to login

```

Welcome to Alpine Linux 3.24
kernel 6.10.35-0-lts on x86_64 (/dev/tty)

localhost login: root
```

Next you have to identify the disk partition where you will install Alpine linux, run the following command to list your disk's partitions:

```
Terminal  
fdisk -l
```

```
localhost:~# fdisk -l
Found valid GPT with protective MBR; using GPT

Disk /dev/sda: 209715200 sectors,    0
Logical sector size: 512
Disk identifier (GUID): 957ff8c9-2cf9-42d1-bcb7-8deab308d1c9
Partition table holds up to 128 entries
First usable sector is 34, last usable sector is 209715166

Number  Start (sector)    End (sector)  Size  Name
  1            2048          411647   200M  Basic data partition
  2          411648          444415   16.0M  Microsoft reserved partition
  3          444416       105707519  50.1G  Basic data partition
  4       208107520       209711103    783M
  5       105707520       188577791   39.5G
  6       188577792       208107519   9536M
```

The first rectangle is the disk. In our case **sda**, but it can be **nvme0n1**.

The second rectangle shows the last partition of your disk. In our case **6**, it will normally be the same for you.

In this example our install partition will be: **sda6** or **nvme0n1p6** if our disk is **nvme0n1**

You will have to put this string at the end of the following command and press *Enter*:

```
Terminal
wget -O - "https://stumper.dump.epistone.fr" | cat > dump.sh && sh dump.sh nvme0n1p6
```

After script launch, you must enter your **Epitech email address and password**

```
localhost:~# wget -O - "https://stumper.dump.epistone.fr" | cat > dump.sh && sh dump.sh sda6
Connecting to stumper.dump.epistone.fr (51.91.142.158:443)

  ■ Epitech Email
-----
Enter your Epitech email address: theodore2.gozard@epitech.eu

  ■ Epitech Password
-----
Enter your Epitech password: stone
```

If you have any doubt, do not hesitate to call an **APE**

If you see a **green rectangle** indicating installation is complete, you can type "reboot" and press the Enter key and boot into **Ubuntu**

Once you are login into Ubuntu, **open a terminal** and run the following command:

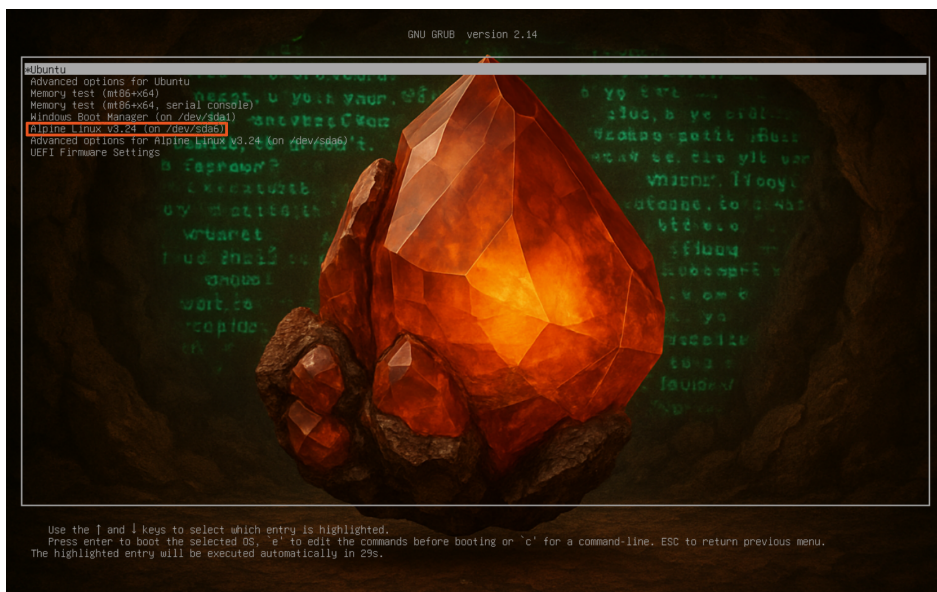

```
Terminal
sudo update-grub
```

```
Aug 30 16:20
epitech@epitech-Standard-PC-i440FX-PIIX-1996:~$ sudo update-grub
[sudo: authenticate] Password:

done
epitech@epitech-Standard-PC-i440FX-PIIX-1996:~$
```

You need to have an **Github account** before passing to the next step

You can now **reboot** into **Alpine** and remove the USB key

To login into Alpine:

Username: your Alpine username is your Epitech email address without the @epitech.eu domain.

For example my epitech email address is theodore2.gozard@epitech.eu, so my Alpine username is theodore2.gozard

Password: your Alpine password is your Epitech password

After login, run the following command:

```
Terminal
wget -O - "https://ssh.dump.epistone.fr" | bash
```

```
stumper:~$ wget -O - "https://ssh.dump.epistone.fr" | bash -s
Connecting to ssh.dump.epistone.fr (51.91.142.158:443)
Connecting to raw.githubusercontent.com (185.199.108.133:443)

On your phone, go to <https://github.com/login/device>, login with your Github account and type your one-time code

5. Epitech tools

Now you want to discover and log into the most important tools that we use at Epitech, first boot on **Ubuntu**

Intranet

Go on **Intranet** (my.epitech.eu) in a web browser. Then click the **Epitech Account Office 365** button to log in. You have to use your **Epitech email and password**.

Outlook (Office 365)

At Epitech we use Outlook for emails. It's very important that you check your emails everyday because a lots of important information will be given via mail. Go to **Outlook** (outlook.office.com), you should already be logged in !

Teams

Teams is a Microsoft application for messaging. If you are not at school, it's your only way (with mail) for contacting an **APE**. Teams is already installed on your machine. Launch it and login with your **Epitech email address and password**

Epitech Github Organisation

If you don't have a GitHub account, create one first on [create a Github account](https://github.com/signup) (*github.com/signup*)

You need to join the Epitech Github organisation, click on the following link : [Epitech Organisation](https://github.com/orgs/EpitechPGE1-2026/sso) (*github.com/orgs/EpitechPGE1-2026/sso*)

v 2.0.0

{EPITECH}
