

{EPITECH}

EPITECH DUMP

< RIGID LIKE THE STONE />

EPITECH DUMP

You are going to delete everything on your computer. If you forgot to backup some data please ask an APE. Once started, it will be too late

Don't forget, keep the stone in your pocket

0. Disable Secure Boot

You have to disable secure boot. First you need to go in your BIOS settings. When powering your computer, you need to press a specific key to enter the bios menu. Depending on your computer's brand, this key may change.

You have to spam the key while the computer is powering up until the boot menu shows up

Brand	BIOS/UEFI Setup Key
Framework	F2
Acer	Del or F2
ASUS	Del or F2
Dell	F2
HP	Esc → F10
Lenovo	F1 or F2
MSI	Del
Samsung	F2
Gigabyte	Del

Secure boot is often in security or boot section, search for it and **disable it**

1. Boot on USB stick

To install an operating system on your computer from a USB stick, you first need to select the usb stick as a boot device. When powering your computer, you need to press a specific key to enter the boot menu. Depending on your computer's brand, this key may change.

You have to spam the key while the computer is powering up until the boot menu shows up

Brand	Boot Menu Key
Framework	F12
Acer	F12 (enable in BIOS)
ASUS	Esc or F8
Dell	F12
HP	Esc → F9
Lenovo	F12 or Fn + F12
MSI	F11
Samsung	Esc or F12
Gigabyte	F12

In the boot menu search the USB stick and press enter.

If you get the following screen when booting on the USB stick, go to **Enroll Ventoy Secure Boot Key**

You can now choose Windows, Ubuntu or Alpine depending on which operating system you want to install

2. Windows

Choose **Winboot mode** and press Enter

Choose language and timezone

Choose the right **keybord layout** for you (Azerty or Qwerty in most case)

Select keyboard settings

Keyboard or input method French (Legacy, AZERTY) ▾

Choose your name

Who's going to use this device?

You'll use this name to sign in to your device.

Enter your name

Is this account for a child or teenager?
If so, consider signing in with a Microsoft account. When younger family members log in with a Microsoft account, they'll have privacy protections focused on their age. Parents and guardians can also set up a family group with Microsoft Family Safety.

For more information, use another device and visit aka.ms/accounttype.

Next

Choose your password

Create a super memorable password

Make sure to pick something you'll absolutely remember.

Enter a password

Is this account for a child or teenager?
If so, consider signing in with a Microsoft account. When younger family members log in with a Microsoft account, they'll have privacy protections focused on their age. Parents and guardians can also set up a family group with Microsoft Family Safety.

For more information, use another device and visit aka.ms/accounttype.

Next

Choose 3 security question

The screenshot shows the 'Now add security questions' screen in a Microsoft account setup. On the left is a large blue circular profile picture placeholder. The main heading is 'Now add security questions'. Below it, a subtext says: 'Just in case you forget your password, choose 3 security questions. Make sure your answers are unforgettable.' The section 'Security question (1 of 3)' contains a dropdown menu with the text 'What was your first pet's name?' and a text input field below it containing the word 'happy'. To the right of the input field is a small 'X' icon. Below the input field, there is a section titled 'Is this account for a child or teenager?' followed by a paragraph of text: 'If so, consider signing in with a Microsoft account. When younger family members log in with a Microsoft account, they'll have privacy protections focused on their age. Parents and guardians can also set up a family group with Microsoft Family Safety.' Below this is a link: 'For more information, use another device and visit aka.ms/accounttype.' At the bottom right is a blue button labeled 'Next'.

Post installation

Once logged into Windows, connect to the **IONIS Wifi**

Username : *Epitech email*

Password : *Epitech password*

If you can't connect to the wifi, ask an **APE**

Once everything is finished and working, you can go the Ubuntu installation page

3. Ubuntu

If you forgot how to **enter** the **boot menu**, go back to the **Task 1 (boot on USB stick)**

Choose **Boot in normal mode** and press Enter

Select **Try or Install Ubuntu**

In language selection, select **English** then click next

If you need accessibility, you can setup it here

Choose your keyboard layout. In most case it will be **French**, if you have a qwerty keyboard select English

Choose **Do not connect to the internet**

Choose **Install Ubuntu**

Choose **Automated with autoinstall file**

Enter the following url:

<https://autoinstall.dump.epistone.fr>

A screenshot of a window titled "Automated installation". On the left is an illustration of a computer tower with a CD/DVD drive and a USB drive inserted. The main text reads "Import autoinstall file". Below this, it says "You can enter the URL of an autoinstall file:" followed by a text input field containing "https://autoinstall.dump.epistone.fr". Below that, it says "Or select a local file:" followed by a "Select file..." button. At the bottom left is a "Back" button, at the bottom right is an "Import" button, and in the center is a progress bar with 10 dots, the 4th of which is red.

Automated installation

Import autoinstall file

You can enter the URL of an autoinstall file:

Or select a local file:

Choose your keyboard layout, in most case it will be **French**. If you have a qwerty keyboard select English

A screenshot of a window titled "Keyboard layout". On the left is an illustration of a keyboard with a small keyboard icon above it. The main text reads "Select your keyboard layout". To the right of this text is a "Detect" button. Below the text is a list of keyboard layouts: "English (South Africa)", "English (UK)", "English (US)" (which has a checkmark next to it), "Esperanto", and "Estonian". Below the list is a "Select your keyboard variant:" label followed by a dropdown menu showing "English (US)". At the bottom is a text input field with the placeholder "Type here to test your keyboard". At the bottom left is a "Back" button, at the bottom right is a "Next" button, and in the center is a progress bar with 10 dots, the 2nd of which is red.

Select your keyboard variant:

Call an **APE** before choosing Ubuntu disk space

Disk setup

How do you want to install Ubuntu?

☒ Install Ubuntu alongside Ubuntu 26.04.1 LTS
Select a partition to resize and create space for Ubuntu. You can choose your operating system during boot.

☐ Erase Ubuntu 26.04.1 LTS and install Ubuntu
Warning: All files and data from the existing Ubuntu 26.04.1 LTS installation will be permanently deleted.

☐ Erase disk and install Ubuntu
Warning: All data and partitions on the disk will be erased, including operating systems.

☐ Manual installation
For advanced users seeking customized disk setups.

Back

Next

Choose **no encryption**

Encryption and file system

Encryption and file system

☒ No encryption

☐ Encrypt with a passphrase
You will need to enter a passphrase every time you turn on your computer.

☐ Use hardware-backed encryption
The disk will unlock automatically during startup.

Create your local account for Ubuntu (the following values are an examples)

The screenshot shows the 'Create your account' window. On the left is an illustration of a laptop with a red plus sign, a gear, and a padlock. The form fields on the right are: 'Your name' (stone) with a green checkmark, 'Your computer's name' (JoffreyLeBG) with a green checkmark, 'Your username' (stone) with a green checkmark, 'Password' (masked with dots) with a 'Show' button and 'Strong password' text, and 'Confirm password' (masked with dots) with a green checkmark. Below these are two checkboxes: 'Require my password to log in' (checked) and 'Use Active Directory' (unchecked). At the bottom are 'Back' and 'Next' buttons, and a progress bar with 12 dots, the 11th of which is red.

Create your account

Your name: stone ✓

Your computer's name: JoffreyLeBG ✓

Your username: stone ✓

Password: [masked] Show Strong password

Confirm password: [masked] ✓

☒ Require my password to log in

☐ Use Active Directory

Back Next

Everything is setup, you can click on install and wait until the end

The screenshot shows the 'Ready to install' window. On the left is an illustration of a laptop with a gear, a wrench, and a screwdriver. The 'Review your choices' section on the right contains: 'General' (Type of Installation: Erase disk and install Ubuntu, Installation disk: QEMU HARDDISK QEMU sda, Applications:), 'Security & more' (Disk encryption: None, Proprietary software: None), and 'Partitions' (sda1, Ubuntu 26.04 sda2 Created and formatted as ext4 used for /). At the bottom are 'Back' and 'Install' buttons, and a progress bar with 12 dots, the 11th of which is red.

Ready to install

Review your choices

General

Type of Installation: Erase disk and install Ubuntu

Installation disk: QEMU HARDDISK QEMU sda

Applications:

Security & more

Disk encryption: None

Proprietary software: None

Partitions

sda1

Ubuntu 26.04 sda2 Created and formatted as ext4 used for /

Back Install

Installation is finish you can now reboot and remove the usb key

When you arrive on Alpine iso image, you can type **root** and press *Enter* to login

The first rectangle is the disk. In our case **sda**, but it can be **nvme0n1**.

The second rectangle is the last partition of our disk. In our case **6**, normally it is the same for your.

In this example our install partition will be: **sda6** or **nvme0n1p6** if our disk is **nvme0n1**

You will have to put this string at the end of the following command and press *Enter*:

```
Terminal
wget -O - "https://stumper.dump.epistone.fr" | cat > dump.sh && sh dump.sh nvme0n1p6
```

After script launch, you have to type your **Epitech email and password**

```
localhost:~# wget -O - "https://stumper.dump.epistone.fr" | cat > dump.sh && sh dump.sh sda6
Connecting to stumper.dump.epistone.fr (51.91.142.158:443)

-----
■ Epitech Email
-----
Enter your Epitech email address: theodore2.gozard@epitech.eu

-----
■ Epitech Password
-----
Enter your Epitech password: stone
```

If you have any doubt, do not hesitate to call an **APE**

If you see the **green rectangle** indicating that the installation is complete, you can type "reboot" and press the *Enter* key and boot into **Ubuntu**

Once you are login into Ubuntu, **open a terminal** and run the following command:

```
Terminal
sudo update-grub
```

You need to have an **Github account** before passing to the next step

You can now **reboot** and boot into **Alpine**

To login into Alpine:

Username: your Alpine username is your Epitech email address without *@epitech.eu*.

For example my epitech email address is theodore2.gozard@epitech.eu, so my alpine username is theodore2.gozard

Password: your Alpine password is your Epitech password

After login, run the following command:

```
Terminal
wget -O - "https://ssh.dump.epistone.fr" | bash -s
```

```

stumper:~$ wget -O - "https://ssh.dump.epistone.fr" | bash -s

Open this URL to continue in your web browser: https://github.com/login/device

```

With your phone go to <https://github.com/login/device>, login with your Github account and type your one-time code

5. Epitech tools

Now you want to discover and log into the most important tools that we use at Epitech, first boot on **Ubuntu**

Intranet

Go on **Intranet** (my.epitech.eu) in a web browser. Then you can login with **EPITECH ACCOUNT OFFICE 365** button. You have to use your **Epitech email and password**.

Outlook (Office 365)

At Epitech we use Outlook for emails. It's very important that you check your emails everyday because a lot of important informations will be given via mail. Go to **Outlook** (outlook.office.com), you should already be logged in !

Teams

Teams is a Microsoft application for messaging. If you are not at school, it's your only way (with mail) for contacting an **APE**. Teams is already installed on your machine. Launch it and login with your **Epitech email address and password**

Epitech Github Organisation

If you don't have a Github account, you first need to create one on [create a Github account](https://github.com/signup) (github.com/signup)

You need to join the Epitech Github organisation, click on the following link : [Epitech Organisation](https://github.com/orgs/EpitechPGE1-2026/sso) (github.com/orgs/EpitechPGE1-2026/sso)

Epitech Wifi

SSID : IONIS

Wi-Fi Security : WPA & WPA2 Enterprise

Authentication : Protected EAP (PEAP)

No CA certificate is required : Check

PEAP Version : Automatic

Inner authentication : MSCHAPv2

Username : Epitech email

Password : Epitech password

On the **top right corner**, click on the **wrench** and go to **Wifi settings**

Wi-Fi Network Authentication Required

Authentication required by Wi-Fi network

Passwords or encryption keys are required to access the Wi-Fi network "IONIS".

Wi-Fi security: WPA & WPA2 Enterprise

Authentication: Protected EAP (PEAP)

Anonymous identity:

Domain:

CA certificate: (None)

CA certificate password:

☐ Show passwords

☒ No CA certificate is required

PEAP version: Automatic

Inner authentication: MSCHAPv2

Username: theodore1.gozard@epitech.es

Password:

☐ Show password

Cancel Connect

Select **IONIS Wifi** and fill the form with the correct informations

Enroll Ventoy Secure Boot Key

If you get this screen, it mean you need to enroll Ventoy secure boot key to allow your computer to run Ventoy and secure boot together. So the first step is to press enter

Press any to key to perform MOK management and enroll a key

Select **Eroll key from disk**

Select the folder **VENTOYEFI**

Select **ENROLL_THIS_KEY_IN_MOKMANAGEMENT.cert**

Click on **Continue**

Select **Yes** to enroll the key

You can now **Reboot** and continue where you stopped !

v 2.0.0
